Skills

- **Languages:** Python, SQL
- **Technologies:** Amazon Web Services (AWS), Microsoft SQL Server, PostgreSQL, Power BI, Azure Functions
- **Data Engineering:** ETL/ELT, Query Optimization, Data Modeling, Data Validation, API Integration, Data Migration

Certifications

AWS Certified Developer – Associate — Amazon Web Services Training and Certification, May 2025

Microsoft Power BI Data Analyst — Microsoft, Aug 2025

Experience

NextEra Energy — Palm Beach Gardens, FL
Programmer Analyst II — Mar 2026 - Present

- Refactored daily ETL pipeline for budget prediction application by optimizing SQL queries and removing redundant processing nodes, cutting runtime from 4.5 hours to 75 minutes
- Added an in-app visualization comparing Weibull lifetime models over time by iteratively censoring and re-aging asset populations at set intervals, speeding up data validation
- Eliminated intermittent data loss caused by mismatched grouping keys across ETL steps, replacing a non-deterministic, sort-dependent asset ID key with a stable location key
- Enabled natural-language document retrieval in an internal AI chat tool by building a middleware layer that translates LLM-extracted parameters into formatted DQL metadata queries

Programmer Analyst — Sep 2025 - Mar 2026

- Onboarded an internal customer to the budget prediction application, adapting it to their business processes and replacing manual spreadsheets with an automated system of record
- Deployed AWS infrastructure with CDK, including Step Functions pipelines orchestrating ECS tasks, an RDS PostgreSQL database, and a UI/API, under a tightly restricted IAM build role
- Diagnosed and resolved silent data loss in an ETL pipeline caused by an upstream source data change, restoring 30% of records and enabling lifetime modeling for previously excluded assets

Skyline Analytics — Boca Raton, FL
Junior ETL Software Engineer — Dec 2024 - Mar 2025

- Automated daily ingestion of client financial data by building ETL integrations in Azure Functions that extracted, cleaned, and loaded POS, HR, and compensation data into SQL databases
- Delivered report-ready datasets for analysts in Power BI by building and optimizing SQL views that aggregate and structure client financial data from the ETL output
- Reduced storage costs and improved scalability by migrating client databases from Microsoft SQL Server to PostgreSQL on AWS RDS, converting schemas and views and validating migrated data

Family Business Funding — Boca Raton, FL
IT Intern — Jan 2023 - Dec 2023

- Configured the OrgMeter CRM to match the company's business processes, setting up applicant workflow stages, payment status tracking, and role-based access control (RBAC)
- Ensured the software met employee and client needs by acting as the liaison between nontechnical staff and the vendor's developers, translating feedback into feature requests
- Consolidated records for 1,000+ clients into a single system of record by transferring data from spreadsheets and PDF contracts into the new platform

Education

Florida Atlantic University
M.S. Business Analytics — Expected Dec 2026

University of Florida
B.S. Computer Science — May 2024
